Overview

The CPRF School of Adaptive Computer Training is devoted to improving marketable computer skills for people with disabilities and others affected by the digital divide. This is accomplished through completely adaptive classrooms which use state-of-theart, adjustable workstations and assistive software and devices to allow people with disabilities to gain the skills needed to compete in today's highly competitive job market.

In addition to the school's Microsoftapproved curriculum, students obtain globally-recognized technical certifications. The school's Business Advisory Council, comprised of area business leaders, meets a number of quality control duties. Some of those duties include ensuring the courses meet or exceed the requirement of hiring authorities, evaluating student preparedness, providing classroom presentations and assisting with placement activities.

Since its beginning, the SACT has continued to forge lasting relationships toward providing qualified job candidates for today's highly competitive business communities.

The SACT has established itself as a premier training option that offers a team of professionals who work together toward individual success — in the classroom and in today's dynamic work place. This "total package" approach is the SACT cornerstone and is a proven model for success.
